

Managing Project Budgets and Costs with a Template

By Terry Kneeburg, Sensei Project Solutions

Have you ever struggled with planning and tracking your project budgets and costs in Microsoft Project? We would like to introduce the **Project Budget and Costs Template** which includes a helpful guide to walk you through the 4-step process. This template takes advantage of the powerful new Reports feature in Microsoft Project 2013.

Overview

When you open the template, you will be presented with a guide which outlines the steps in the process: **Create, Plan, Track, and Report**. Click on the **Start** button to view the first step in the process. Work through each page of the guide to view detailed instructions.

The screenshot shows the main interface of the Project Budget and Costs Template. At the top, there is a navigation bar with five tabs: "Get Started" (highlighted in green), "Create Cost Resources", "Plan Budget and Costs", "Track Costs", and "Report Costs". Below the navigation bar, the main heading reads "Welcome to Project Budget and Costs Template". Underneath, a sub-heading says "Manage your project budget and costs in 4 easy steps" followed by a "Start >" button. Below this, there are four buttons representing the steps: "Create >", "Plan >", "Track >", and "Report >".

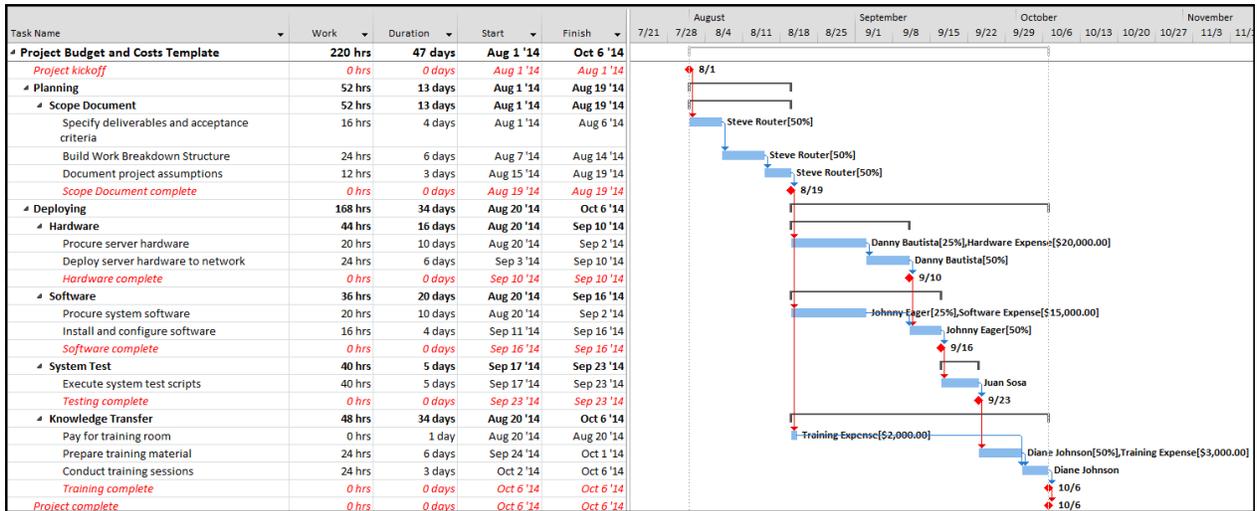

The interface also features the Sensei Project Solutions logo on the left and the Microsoft Partner logo on the right, which includes the text "2014 Partner of the Year Winner" and "Project and Portfolio Management". Below these logos, there are four colored boxes representing different offerings:

- SERVICES** (blue box): Microsoft PPM Deployments, On-going Support Services
- SOLUTIONS** (red box): Jumpstart & Report Packs, Agile PPM
- TRAINING** (green box): Role-based, Process-focused, Best Practices Books & E-Learning
- APPS** (purple box): Project & SharePoint, Phones / Tablets / Windows

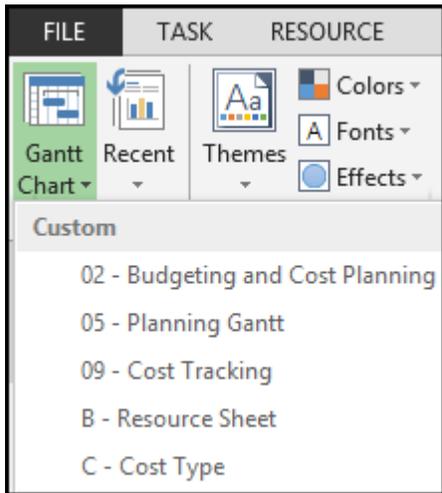

At the bottom of the interface, there is a logo consisting of the letters "M", "P", "you" (in a red circle), and "G", with the tagline "Where Project Managers and Microsoft® Meet" below it.

Views, Reports, and Sample Schedule

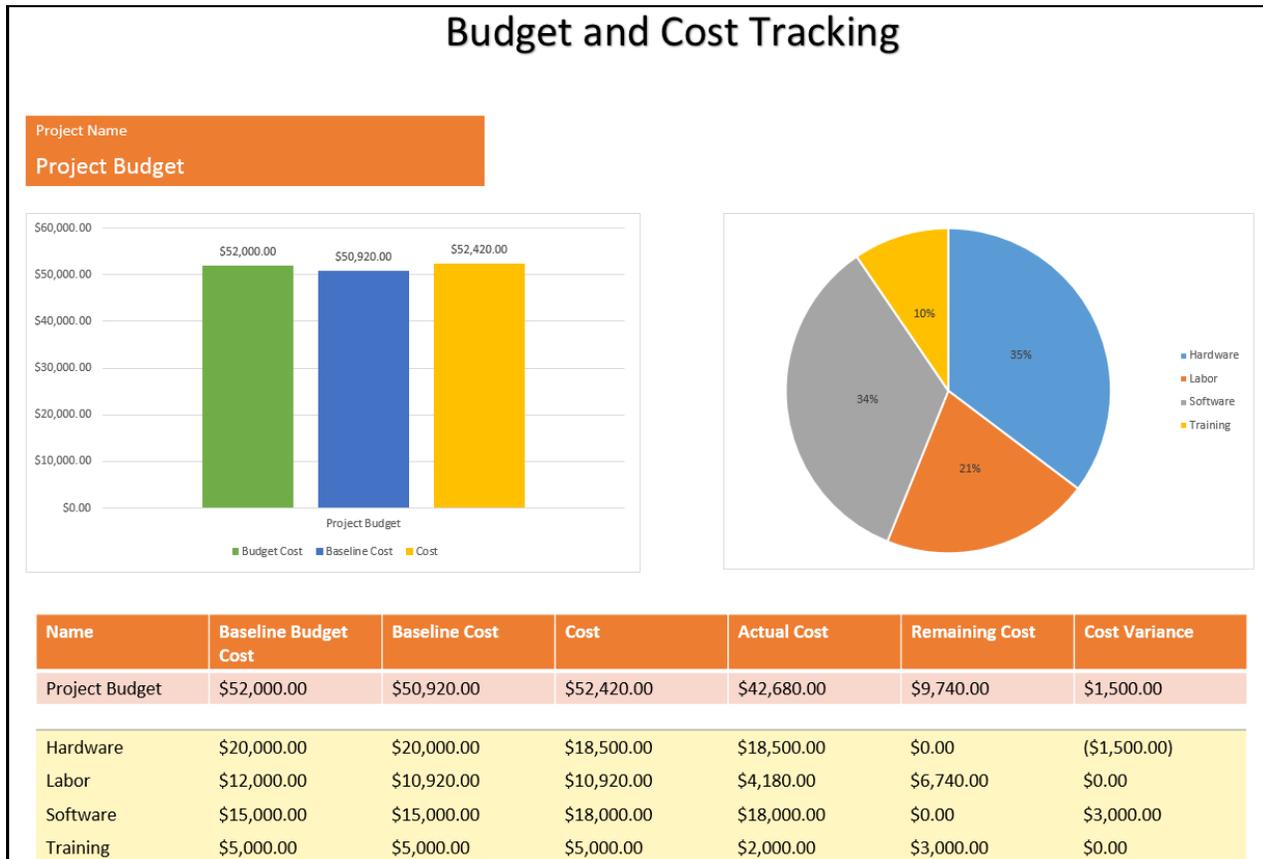

The template includes several items to help you get started. First, there is a sample project schedule with budgets and costs included. Use this to visualize a fully-planned project schedule.

Second, custom views provide access to the fields you will need at each stage in the process. These may be accessed in the same way as other project views.

Finally, the sample custom report shown below is provided so that you may view the project budget and cost breakdown. Access this report from the **Report** ribbon by selecting **Custom**, then **Budget and Cost Tracking**.

Tips

1. If you are viewing the project schedule and want to access the help pages, just go to the **Report** tab, select **Custom**, and choose **Project Budget Start**.
2. On each page of the guide you may select either **Previous** or **Next** to navigate to other pages.
3. Within the guide, access a specific page by clicking on the name in the bar at the top of the page.
4. Look for [blue text](#) in the guide for quick access to views and reports.

Best of luck with your projects!

About Sensei Project Solutions

Sensei Project Solutions, Inc. winner of the 2014 Microsoft Project and Portfolio Management (PPM) Partner of the Year, specializes in PPM deployments with Microsoft Project, Microsoft Project Server and Microsoft Project Online. With extensive experience on hundreds of PPM deployments and with thousands of users trained, Sensei Project Solutions brings a process-focused approach and support for industry standards and best practices to all engagements. Sensei is a Registered Education Provider (R.E.P.) with the Project Management Institute (PMI®) and provides Professional Development Units (PDUs) from PMI for all Training courses. As a Gold certified Microsoft Partner, we offer a complete set of services to help an organization make their Microsoft PPM deployment successful, including full implementation and support services, training, pre-configured solutions, report packs, and Apps across multiple platforms.
